hereby declare under our sole responsibility that our products

Excellent PavePad® System

Article no:

PaveShim 1.5, PaveDamper 4.5, PavePad 7.5, PavePad 15, PavePad 45 and PavePad 90
Pave-T, Pave-X, Pave-Drain

to which this declaration refers, conforms to the following directives according to

EN 15804

PavePads are supplied ready-to-use and shall only be stacked to the desired height on the applicable area without the use of coupling agents. Side pieces and corners pieces are made by dividing the PavePads in half and quarters - either by simply breaking the PavePads up or by cutting them with a knife. This provides no excess remains.

PavePad is made from polyethylene (PEHD) stabilized with carbon black. The raw materials used are food processing approved. The production process can be supplemented with regrind of returned PavePads.

Polyethylene (PEHD) has a softening temperature (ASTM D-1525) on 120°C. There is a max. usage temperature of 110°C.

Using polyethylene (PEHD) in a processed form poses no health hazards or risk of forming substances harmful to health.
